PROFILE

Computer Science undergraduate with hands-on experience building AI/ML systems, computer vision pipelines, and modular software architectures across full-stack and cloud environments. Skilled in algorithm design, model training and evaluation, and REST API development, demonstrated through applied projects in wellness technology and agricultural decision support. Interested in contributing strong computational problem-solving and software engineering fundamentals to technically challenging projects at CERN.

EDUCATION

B.Tech, Computer Science & Engineering

CGPA: 7.8/10

Priyadarshini Institute of Science & Technology for Women, India

Relevant Coursework: Data Structures & Algorithms, Design & Analysis of Algorithms, Machine Learning, Computer Networks, Database Management Systems, Web Technologies, DevOps

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript

AI/ML: Machine Learning, Computer Vision, Classification, Model Training & Evaluation, TensorFlow, scikit-learn, OpenCV

Software Engineering: FastAPI, Flask, React.js, REST APIs, Object-Oriented Programming, Modular Architecture

Databases/Cloud: PostgreSQL, AWS

Tools: Git, GitHub, VS Code

Core CS Fundamentals: Data Structures & Algorithms, Complexity Analysis, Debugging, Software Development

PROJECTS

PRANAWELL — AI-Powered Wellness & Skin Health Platform | Python, FastAPI, React.js, TensorFlow/PyTorch, OpenCV, PostgreSQL, AWS

- Designed a modular full-stack architecture separating frontend, backend, ML inference, database, caching, and cloud-storage components to support scalability and maintainability.
- Built an image-based skin condition classification pipeline using computer vision and deep learning models, integrated through FastAPI REST services for ML inference.
- Implemented a recommendation module generating personalized nutrition, hydration, exercise, and lifestyle suggestions from model outputs.
- Investigated Grad-CAM visualization to improve interpretability of computer vision model predictions.

KrishiAI — ML-Based Agricultural Decision Support System | Python, Flask, TensorFlow, scikit-learn

- Trained and evaluated crop recommendation and plant disease classification models using machine learning and deep learning on agricultural and image datasets.
- Achieved approximately 99.32% accuracy on the evaluated dataset for the crop recommendation model.
- Integrated trained ML models into a Flask web application to support real-time prediction and user interaction.
- Structured the project across datasets, trained models, application logic, templates, and static resources for maintainable implementation.

Algorithmic Problem Solving | Data Structures & Algorithms

- Implemented and analyzed Quick Sort, Heap Sort, Strassen's Matrix Multiplication, Disjoint Set Union-Find, and Hamiltonian Cycle detection.
- Applied divide-and-conquer, backtracking, and greedy techniques, evaluating time and space complexity for correctness and efficiency.

EXPERIENCE

Generative AI & Cloud Computing Intern — AICTE / BharatCares (CSRBOX)

June 2026 – July 2026

- Completed a 6-week technical internship covering generative AI concepts, cloud computing fundamentals, and AI application workflows through project-oriented technical learning.

AI/Azure Intern — Edunet Foundation, in collaboration with Microsoft & AICTE

June 11 – July 15, 2025

- Built KrishiAI, a machine learning-based agricultural decision support system, applying AI concepts and Azure cloud fundamentals covered during the internship.

CERTIFICATIONS

- IBM AI Literacy — IBM SkillsBuild
- IBM-NSDC Certified Internship Program — Skill Up India
- Generative AI & Cloud Computing Internship — AICTE / BharatCares
- Microsoft-AICTE Internship
